

S-graphs

An S-graph is a simple graph with possible multiple loops. The number of loops at a given vertex is called the loop number or path number of the vertex. The degree of a vertex in an S-graph is the number of edges attached to the vertex plus twice the number of loops (according to Diestel's book on Graph Theory). The signless laplacian of an S-graph G is $Q(G) = A(G) + D(G)$ where $D(G)$ denotes the diagonal matrix of vertex degrees.

The following list is a list of compliant S-graphs. The number of loops if positive is indicated as well occasionally attached paths of finite length attached to vertices. The list is not intended to be complete. Listed eigenvalues are for the corresponding effective matrices in case of attached paths.
