Topos Notes 1980

§1. The interpretation of formulas in categories	p.1.1
1.1 Higher order logic and toposes	1.1
1.2 Extensions and restrictions	1.2
1.3 Remarks concerning the informal uses of logic	1.12
Glossary of notation	1.16
§2. Grothendieck toposes	2.1
§3. Complete Heyting algebras	3.1
3.1 The category of complete Heyting algebras	3.1
3.2 Spaces, duality, locales	3.11
§4. The category of sheaves over a cHa	4.1
4.1 Sheaves	4.1
4.2 L-sets	4.2
4.3 L-sets as a topos	4.11
4.3.1 The finite left-limit structure	4.11
4.3.2 Subobjects	4.13
4.3.3 The subobject classifier	4.14
4.3.4 Exponentials, power-sets	4.17
4.4 Logic in L-sets	4.22
4.5 The effect of morphisms between cHa's	4.28
4.6 Restatin matters in the sheaf-language	4.33
4.6.1 The global section functor	4.34
4.6.2 Exponentials in $\text{Sh}(L)$	4.35
4.6.3 Subsheaves	4.38
4.6.4 Ω and powersheaves	4.40
§5. Internal topology	5.1
5.1 Internal cHa's and their representations	5.1
5.2 Restating matters in the sheaf theoretic language	5.22
5.3 The object of cHa-morphisms	5.27
5.4 The real numbers in intuitionism; the real number object in toposes (ends on page 5.40)	5.33
