Multitopic sets are the same as many–to–one computads

by Victor Harnik[1] (University of Haifa),
Michael Makkai[2] (McGill University)
and Marek Zawadowski[3] (University of Warsaw)

Preliminary version, June 11, 2002.

Table of contents

Introduction p. 3

§1. The multicategory of function replacement p. 11
Higher arity assignments p. 11
The $\square$-composition of arrows of a free multicategory p. 17
The ψ-structure for the $\square$-composition p. 22
Invariance of $(\square, \psi)$ under renaming transformations p. 27
The commutative law for the $\square$-composition p. 30
The $\varphi^{\square}$-structure p. 35
The associative law for the $\square$-composition p. 39
The multicategory of the $\square$-composition p. 42
Invariance under morphisms p. 47
Multitopic sets and their morphisms p. 49
Miscellaneous p. 54

§2. The multitopic nerve of an ω-category p. 58
(The statement of definition of the nerve functor) p. 61
(The prove of the existence of the nerve functor) p. 65
Proof of the associative law for $\boldsymbol{E}_n$ p. 74
Generalized middle exchange p. 75

Proof of the commutative law
for the composition in $\boldsymbol{E}_n$ p. 78

§3. Simultaneous composition p. 86
Part 1: Simultaneous composition
in a general multicategory p. 86
Part 2: Simultaneous composition
in a free multicategory and in the associated
multicategory of function replacement. p. 92
Part 3: Simultaneous composition
for pasting diagrams in a multitopic set p. 99
Part 4. Simultaneous composition
in the multicategories associated with $\boldsymbol{M}=[\boldsymbol{X}]$. p. 112

§4. The free ω-category on a multitopic set p. 118
(Definition of " n-cell"
in the free ω-category $\boldsymbol{Y}$ on $\boldsymbol{R}$) p. 119
(Definition of identity cells in $\boldsymbol{Y}$) p. 121
(Definition of composition in $\boldsymbol{Y}$) p. 122
(Preparing for the verification
of the ω-category laws) p. 126
(The domain/codomain laws) p. 129
(Associativity in $\boldsymbol{Y}$) p. 130
(Middle-exchange in $\boldsymbol{Y}$) p. 134
(identity cells in $\boldsymbol{Y}$) p. 136

§5. The adjunction p. 139
The counit map p. 139
The unit map p. 148
The first triangle identity p. 160
The second triangle identity p. 164

§6. Many-to-one computads p. 167

References p. 182
