

## Cal II (S) (Maths 201-NYB)

**Answers****Answers**

1. (a) 1 (b)  $\infty$
2. (a) D ( $nTT$ ) (b) C (to 1)
3. (a) (LCT) with  $\sum \frac{1}{n^2}$  (C pS):  $\lim \frac{\sin(1/n^2)}{1/n^2} = 1$  so  $\sum$  converges  
 (b) (RT):  $\lim \frac{a_{n+1}}{a_n} = \infty > 1$ :  $\sum$  diverges  
 (c) (CT) with  $\sum \frac{1}{n^{3/2}}$  (C pS), or  
 ( $\int T$ ):  $f$  cont, pos, decr;  $\int_2^\infty f dx = \frac{1}{2} \ln 2 + \frac{1}{2}$  converges:  $\sum$  converges  
 (d) ( $\sqrt[n]{T}$ ):  $\lim \sqrt[n]{a_n} = \lim \frac{25}{n} = 0 < 1$ :  $\sum$  converges
4. (a) ( $nTT$ ):  $\lim \frac{2^n}{n^2} = \infty \neq 0$ :  $\sum$  diverges (could use (RT) instead)  
 (b) (LCT) with  $\sum \frac{1}{n^{5/4}}$  (C pS):  $\lim \frac{a_n}{b_n} = \frac{1}{\sqrt[4]{2}} \neq 0, \neq \infty$  so AC.
5.  $-6 \leq x < 2$  ( $R = 4$ ) (Use (AST) and (LCT) at endpoints)
6. (a)  $a_n \rightarrow 0$  ( $nTT$ )  
 (b) It converges: (LCT) with  $\sum a_n$ .
7.  $\sum_{n=1}^{\infty} (-1)^{n+1} x^n$ ; converges for  $-1 < x < 1$ .
